

Incident 1: Maintenance Release Issued Without Complete Task Card Closure (CAR-145)

1. **Description:** Aircraft/component released to service with incomplete task cards, deferred sign-offs, or missing certifying staff authorization checks.
2. **Possible Damage:** Undetected maintenance error → technical failure, airworthiness non-compliance, potential incident/accident, DGCA enforcement action.
3. **Risk Priority:** High
4. **Status:** In Progress
5. **Mitigation:**
 1. Enforce “no RTS without task closure” control in MRO workflow (digital gating).
 2. Role-based authorization validation for CRS issue (certifying staff list vs job).
 3. Independent QA verification for critical tasks and repeated findings.

Incident 2: Overdue AD / Mandatory Modification Not Actioned in Time (Continuing Airworthiness)

1. **Description:** Airworthiness Directives / mandatory modifications not tracked or missed due to weak CAMO planning / record mismatch.
2. **Possible Damage:** Aircraft becomes non-compliant; elevated safety risk; grounding; regulatory penalties; insurer/audit exposure.
3. **Risk Priority:** High
4. **Status:** Assigned
5. **Mitigation:**
 1. Central AD tracker with due-date alerts + escalation thresholds.
 2. Monthly compliance reconciliation between CAMO, CAR-145, and operator records.
 3. Proof-of-compliance evidence bundle per AD (work order + CRS + parts trace).

Incident 3: Uncontrolled Tool Calibration Expiry Used in Maintenance (CAR-145)

1. **Description:** Tool/equipment calibration expired but still used due to inventory gaps or poor calibration visibility.
2. **Possible Damage:** Incorrect torque/settings → latent defects; repeat snags; component failure; audit findings.
3. **Risk Priority:** Medium
4. **Status:** In Progress
5. **Mitigation:**
 1. Block tool issue if calibration expired (store + digital lock).
 2. Weekly auto-report of tools nearing expiry; mandatory withdrawal workflow.

3. Random QA checks during maintenance sampling.

Incident 4: Flight Data Analysis Programme Not Performed / Trends Ignored (FDAP)

1. **Description:** FDAP/QAR exceedances repeatedly observed but not analysed or closed with corrective actions.
2. **Possible Damage:** Repeated unstable approaches / exceedances increase accident probability; DGCA audit observations.
3. **Risk Priority:** High
4. **Status:** Assigned
5. **Mitigation:**
 1. FDAP governance: exceedance triage SLA + closure evidence.
 2. Safety Action Group reviews and trend dashboards with thresholds.
 3. Training interventions + SOP updates with sign-off traceability.
